## Women Empowerment – Self Grading
Developing a self grading system and Finding data collection Software

Problem Analysis of the Self Grading method by AATAPI

1. Purposefully grading is done so that one group will achieve more grades than the one who deserves

2. No proper software is used where all data can be stored

3. The difference in opinion, visualization, and aspects

Suggested solution

RUBRIC: Software/program or tool that can be helpful to NGOs for grading.

A rubric is a simple way to set up grading criteria for assignments. It lets you be more objective when assessing a person. A **rubric** is typically an evaluation tool or set of guidelines used to promote the consistent application of learning expectations, learning objectives, or learning standards, or to measure their attainment against a consistent set of criteria.
